

Datasheet

Online NIR Spectrometer

IR2100

Description

IR2100 is an online near-infrared full spectrum detection and analysis instrument developed by Optosky. It uses indium gallium arsenide diode array technology, continuous grating full spectrum scanning, parallel processing of all spectral information, online real-time accurate detection, and the detection results can be communicated with the factory system. integrated. It combines exceptional analytical accuracy with speed, ease of use and ruggedness. It is widely used. By establishing a data model, it can quantitatively detect almost all moisture, protein, fat, ash, starch and other component parameters in solid samples (granular and powdery). It is especially suitable for industries such as grain, oil, food, and chemicals online detection.

Features

- Stable optical system
- Advanced rotation system
- Fast measurement speed
- Rich software functions
- Simple installation and maintenance
- Long service life light source

Application

| Grain | Major cereals such as wheat, soybeans, rice, corn, rapeseed, and peanuts; Small grains such as sorghum and oats; cash crops such as flax, and cauliflower seeds. |
|----------------|--|
| industry | Measurable ingredients: |
| | Protein, fat, fiber, starch, amylose, fatty acid composition, various amino |
| | acids, gluten, hardness, sedimentation value, water absorption, etc. |
| Elour | Wheat, flour, bran, noodles and dough, etc. |
| riour | Measurable ingredients: |
| industry | Moisture, protein, fiber, sedimentation value, ash, hardness, gluten, water |
| mausuy | absorption, etc. |
| Maat uus dusta | Various meats and meat products |
| in dustry | Measurable ingredients: |
| maustry | Moisture, protein, fat, ash, water activity, origin traceability, etc. |
| | Semi-finished or final feed products, including pet feed. |
| Feed industry | Measurable ingredients: |
| | Moisture, protein, fat, etc. |
| | Grain storage, starch industry, medicine, tobacco |
| other industry | Measurable ingredients: Moisture, protein, fat, etc. |

1. Selection Guide

| Model | Features | | |
|-------------|--|--|--|
| IR2100 | Basic, 900-1700nm, uncooled spectrometer | | |
| IR2100-17TC | 900-1700nm, cooled InGaAs detector, higher reliability, water cooling system | | |
| IR2100-25TC | 900-2500nm, cooled InGaAs detector, water cooling system | | |

2.Parameter

| | Analysis Parameters | IR2100 | IR2100-17TC | IR2100-25TC | | |
|--------------------|--|--|--|----------------------|--|--|
| 1 | Collection speed | greater than 40 times/second | | | | |
| 2 | Sample volume | 300g or more | | | | |
| 3 | Products analyzed | Solid samples such as granules, flakes, powders, pastes, etc. | | | | |
| 4 | Parameters analyzed | water, protein, fat, fiber, etc. | | | | |
| 5 | Analysis methods | Non-contact, online scanning | | | | |
| 6 | Spot size | About 100mm diameter | | | | |
| Optical parameters | | | | | | |
| 7 | Detector (InGaAs CCD) | 256-pixel 512-pixel ,cooled | | xel ,cooled | | |
| 8 | Spectral system | Gold-plated holographic fixed grating | | | | |
| 8 | Wavelength range | 950nm-1650nm | 900-1700nm | 900-2500nm | | |
| 9 | Wavelength accuracy | less than 0.5nm 1 | | less than 1.0 nm | | |
| 10 | Wavelength stability | less than 0.2nm/year | | less than 0.5nm/year | | |
| 11 | Reference standard | Built-in calibration light source | | | | |
| 15 | Light source | life is not less than 10,000 hours | | | | |
| Inst | Installation Environment | | | | | |
| 16 | Working temperature / | To me another 10° $\sim 50^{\circ}$ by midity $100/\sim 000/$ | | | | |
| 10 | humidity | Temperature | $2 - 10 C^{-30}C$, humidity: $10\%^{-90\%}$ | | | |
| 17 | Working distance | 250mm±100mm | | | | |
| 18 | 3 Installation method Hoisting | | | | | |
| Software function | | | | | | |
| 10 | Result display, record query, data statistics, model establishment and import, probe | | | | | |
| 19 | management and system settings, etc. | | | | | |
| General parameters | | | | | | |
| 20 | Operating System | | Windows | | | |
| 21 | Protection level IP65 | | | | | |
| 22 | Material food grade stainless steel | | steel | | | |
| 23 | Communication | | network port | | | |

| | interface | | |
|----|-----------------------|---|--|
| 24 | Explosion-proof level | EX_TDA21_IP65_T80 | |
| 25 | Power supply | DC 24V, 2A | |
| 26 | Cooling method | Compressed air, water cooling | |
| | | Connector size: 6mm quick twist; | |
| | | Pressure: 0.1MPa~0.4MPa, | |
| | | Flow rate: 30L/min~60L/min | |
| 27 | Dimensions | $130 \text{mm}(\text{H}) \times 360 \text{mm}(\text{W}) \times 160 \text{mm}(\text{D})$ | |
| 28 | Weight | 10kg | |

3.Working Principle

In the near-infrared spectrum region, the absorption of near-infrared light is caused by the stretching vibration of hydrogen-containing atomic groups such as N-H, O-H, and C-H with higher energy in the organic matter contained in the measured substance. This principle can be used to perform corresponding Quantitative analysis of substances.

As shown in the figure below, the light emitted by the instrument through the light source is reflected by the concave reflector and hits the sample directly. The diffusely reflected light on the sample is collected by the concave mirror and enters the integrating sphere, and then transmitted to the spectrometer through the optical fiber connected to the integrating sphere. Measurement.
